PROJECT TITLE: QUICKPOLL

QuickPoll is a real-time online polling tool that lets users create polls, vote, and view live results. It offers anonymous participation without requiring a login, while ensuring fairness with one vote per IP address. This makes it easy to gather opinions and get instant feedback.

Overview

QuickPoll is perfect for classrooms, teams, and communities seeking a hassle-free way to conduct polls. By eliminating the need for logins and using IP-based voting restrictions, it ensures a smooth and integrity-driven polling experience.

Technology Stack

LAYER	Technology
Backend	Node.js + Express
Frontend	HTML, CSS, Bootstrap
Template Engine	Handlebars (hbs)
Database	MongoDB (Mongoose)
Utilities	IP tracking, clipboard

System Requirements (with Technology Used)

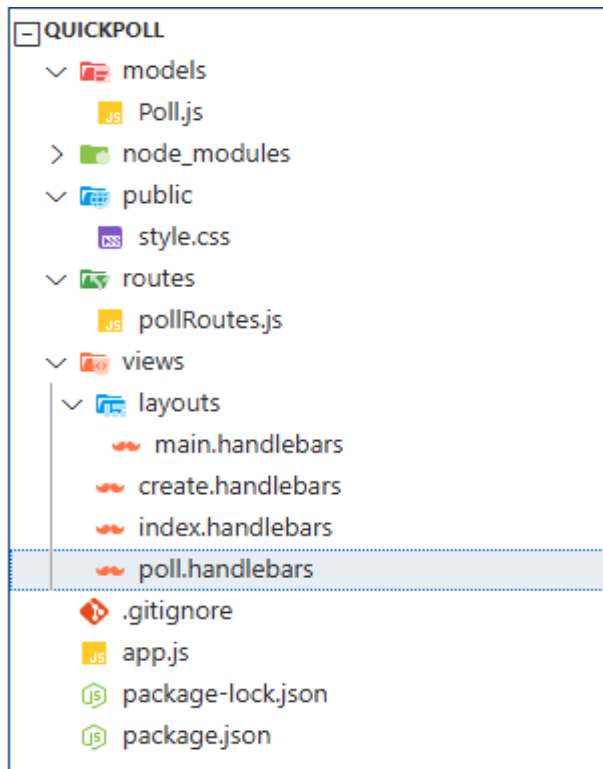

Requirement	Technology Used	Purpose
Node.js	v22.14.0	JavaScript runtime for backend
Express.js	v5.1.0	Web server and routing
MongoDB	v8.0.4	NoSQL database to store polls
Mongoose	^8.16.1	MongoDB ODM (Object Data Modeling)

Handlebars	^8.0.2	View template engine
Bootstrap	v5.3 (via CDN)	UI styling and responsive design
Font Awesome	v6.5 (via CDN)	Icons (used for UI buttons)
Browser	Chrome, Firefox, Edge (latest)	Client-side rendering
OS	Windows, macOS, or Linux	Compatible for development & deployment

Features

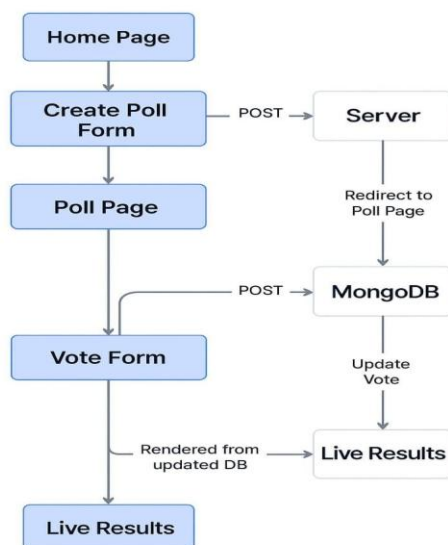

Feature	Description
Create Poll	Add a question with 3 options
Vote Without Login	One vote per IP address
Live Results Display	Real-time vote updates with visual indicators
Close Poll Option	Poll creator can close the poll
Winner & Tie Detection	Detect and highlight winning or tied options
Shareable Link	One-click copy to clipboard
Form Validation	Ensures clean & unique input
Alerts & Feedback	Bootstrap-based visual cues
